Libero Tracking Instructions

1. Enter Home and Visiting Team on Tracking Sheet
2. Next To L: put the # of the Libero being used for that game. If no libero is being used, no tracking will take place.
3. Enter in the "SP" column the starting players for each team. This should be an exact match of the lineup entry in the scorebook.
4. When the Libero enters the game as a replacement, cross off the number of the player the Libero is replacing and put "L" on the line next to the number.
5. Caution: Only the same player's number crossed out before the "L" can be the number after. The only player that can come back into the game for the Libero is the player that the Libero replaced.
6. When the Libero is replaced (by the person that he/she replaced), the "L" is crossed out and the replacing player's number is entered on the line.
7. The Libero Tracker also records all substitutions. When a player (not a Libero) is substituted out of the game, their number is crossed off and the entering player's number is written on the line.
8. There are unlimited Libero replacements but only 18 substitutions per game. It is a good idea to circle substitutions to distinguish them from Libero replacements. The Circles can then be counted in order to confirm the number of substitutions that have taken place.
9. Note: A different Libero can be designated for each game, but the designation must be made on the lineup sheet when it is submitted before each game.
10. Liberos are now allowed to serve from one position in the rotation. The position is not designated before the game. When the libero serves for the first time, a triangle is placed around the serving order position on the tracking sheet.
